REVIEW

of the PhD educational scientific program Management of Maritime Industry field of knowledge 07 Management and Administration, specialty 073 Management, which is developed in National University "Odessa Maritime Academy"

Educational scientific program Management of Maritime Industry, which is prepared at the Departments of Management and Economics of Maritime Transport and Economic Theory and Entrepreneurship in Maritime Transport National University "Odessa Maritime Academy", is aimed at training of third-level higher education "Doctor of Philosophy" candidates for specialty 073 Management field of knowledge 07 Management and Administration.

On the one hand, the PhD educational scientific program fully corresponds to specialty 073 Management, contains all necessary competencies. On the other hand, the uniqueness of the program is defined by questions that reflect the specifics of the marine industry enterprises activity in both the educational and scientific components.

Important feature of the program implementation is the significant experience of the university departments personnel in the field of training transport specialists, taking into account the global labor market development trends. The program combines the research orientation on conducting original investigations by graduate students which are aimed at solving complex problems in the maritime management industry field and applied professional orientation, which involves getting knowledge and skills in the maritime industry management in order to increase the efficiency of the functioning of transport enterprises and state bodies industry management. The subject area corresponds to the name of the educational scientific program Management of Marine Industry".

The program contains competencies and learning outcomes that are necessary for carrying out research, scientific and pedagogical activities in the field of maritime industry management.

The structure of the PhD educational scientific program includes elements necessary for the training of third-level applicants - a language component, which involves the study of professional English for scientific communication, a cycle of general disciplines aimed at studying issues of crisis management methodology and analytical tools of economic research, etc. List of special disciplines includes courses "Sustainable Development Management of the Maritime Transport Industry", "River and Sea Systems Research Methodology", which are aimed at providing knowledge in very specific areas of activity. The volume of the selective part is more than 25% of the total volume of the educational component, which meets the existing requirements.

It is also important that the program determines researches in the applied areas - marine sphere, government and private organizations of the maritime and river transport, scientific organizations. All these directions of research correspond to the modern needs of the Ukraine marine industry development.

The educational scientific program Management of Maritime Industry can be recommended for the training of highly qualified specialists of the specialty 073 Management.
